- 14.00 pm - 17.00 pm

Description

EDIN is a product design / engineering studio, funded in 2013 in Guimarães, which bases its service on a proprietary methodology that integrates from the kick-off of the project all the necessary competence to product development, in view of its technical feasibility in the shortest time and with the lowest cost, counting on a multidisciplinary team with specific expertise in the design, engineering, manufacturing and project management. Endowed with know-how and capacity for implementation and monitoring of all stages of new products development, or development / improvement of existing products, we propose global solutions that respond to the specific requirements of the projects of our clients, assuring them permanent monitoring during the entire development process, from design and engineering of the product, through execution of prototype parts and tools, the final definition of the product and serial production tools.

With a slight, economic and dynamic structure, combined with a deep knowledge of all kinds of engineering plastics and the form of technical partnership we deal with all our customers and suppliers allows us to safely face the challenges presented by the market, with high confidence on results.
